

WARNING FLUSH ONLY TOILET PAPER!

Please don't put yourself at risk or our employees. **"Flushable wipes"** should **NEVER** be flushed.

A recent scientific study showed that COVID-19 survives for up to 14 days in wastewater, and studies have shown viability of coronavirus in feces and urine. Scientific Studies are underway to find out how it might be transmitted.

Use extra caution:

- Wash your hands frequently,
- Wear a mask and protective goggles if you use a plunger in the bathroom,
- Put the toilet seat down when you flush,
- Flush only Toilet Paper.

Sewer backups and work to repair damaged equipment puts people at great risk.

Please teach your guests and renters – you could save more than money.
